## **INSTRUCTIONS AND PARTS LIST**

12681

# YALE® MOTOR DRIVEN TROLLEYS

For 1/2 thru 15 ton YALE Wire Rope Electric Hoists

#### **GENERAL**

YALE Motor Driven Trolleys are designed for use on YALE Wire Rope Electric Hoists in rated loads from 1/2 through 5 tons. They are used singularly on standard lift hoists, or in combination with plain wheel trailer trolleys on low headroom or longer lift hoists.

These trolleys are built in three basic wheel sizes (single motor and/or double motor drive) to accommodate the entire range of rated loads offered in the YALE hoist line. These sizes are 4" diameter wheels, 6-1/2" diameter wheels and 8" diameter wheels.

Push button station, ballast resistors, fuse kit and mainline contactor panels (all optional) will be mounted on trolley and completely wired into the trolley. Current collectors (when ordered) will be shipped loose.

The trolley (or trolleys on long lift and low headroom model hoists) mount on a special integral lug at top of hoist frame. Assembly of trolley(s) on hoist and installation of trolley-hoist unit on its runway beam can be accomplished with minimum effort by following the instructions given herein.

#### **▲**WARNING

This equipment is not suitable or designed to be used in conjunction with lifting or lowering persons.

THE INFORMATION CONTAINED IN THIS MANUAL IS FOR INFORMATIONAL PURPOSES ONLY AND LIFT-TECH INTERNATIONAL DOES NOT WARRANT OR OTHERWISE GUARANTEE (IMPLIEDLY OR EXPRESSLY) ANYTHING OTHER THAN THE COMPONENTS THAT LIFT-TECH MANUFACTURES AND ASSUMES NO LEGAL RESPONSIBILITY (INCLUDING, BUT NOT LIMITED TO CONSEQUENTIAL DAMAGES) FOR INFORMATION CONTAINED IN THIS MANUAL.

#### **ASSEMBLY OF TROLLEY TO HOIST**

- 1. Before installing trolley on hoist, determine the proper orientation of hoist.
  - a. On both single-motor and two-motor trolleys, except on low headroom model hoists, position trolley so that its electrical control panel is on the same side as the electrical compartment of the hoist. **Note:** On long lift model hoists, locate motor driven trolley on mounting lug at motor end of hoist and trailer trolley at opposite end.
  - b. On low headroom model hoists, locate motor driven trolley on mounting lug at drum side of hoist, with electrical control panel toward gear case end. A 2-wheel or 4-wheel trailer trolley mounts on opposite, or electricalcompartment side of hoist.
- 2. Determine proper trolley side plate spacing to assure that adequate wheel clearance (approximately 1/8") is provided on both sides of I-beam, between edges of bottom beam flange and inside faces of wheel flanges. Proper spacing is obtained by varying the number of spacer washers (furnished with trolley) that are installed on suspension pins, between hoist lug and trolley side plates. See Figure 1.

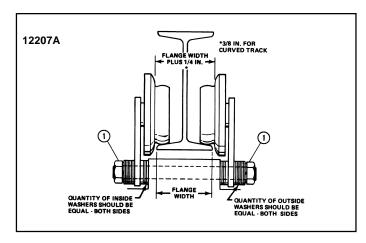

Figure 1. Proper Wheel Spacing

- 3. Due to manufacturing tolerances, I-beams having the same size designations may have varying dimensions making it impossible to prescribe the specific number of spacer washers required between trolley side plates and suspension lug for any given beam size. It will, therefore, be necessary to determine the spacer washer requirement by "trial and error" assembly.
  - a. First measure the exact width of bottom flange on runway beam, and then add 1/4" to that measurement (3/8" for curved beam). The total is the required distance between inside faces of wheel flanges to obtain satisfactory wheel operating clearance. See Figure 1.
  - b. Temporarily assemble trolley to hoist using about 3 or 4 washers at each end of suspension pins, between side plates and suspension lug. Tighten pin nuts for accurate check of spacing.
  - c. Measure distance between inside faces of wheel flanges and compare with the total dimension obtained in paragraph a. above.
  - d. Remove trolley sides and add or remove an equal number of inside spacer washers as required to obtain proper distance between wheels.
  - e. When wheel spacing is correct, remaining spacer washers are to be installed' on outside ends of suspension pins (see note below) and the pins then secured with lockwashers and hex nuts. The nuts (1, Figure 1) should not be completely tightened until after hoist and trolley are mounted on runway beam.

**Note:** It is important that all spacer washers that come with trolley be used. Install remaining spacer washers equally on outside ends of pins.

4. Open cover on trolley electrical panel enclosure. Remove one knockout from enclosure and thread hoist flexible cable leads through hole. Secure box type connector with locknut and connect leads to terminal strip in accordance with appropriate wiring diagrams furnished with trolley.

#### **CURRENT COLLECTORS**

1. Current collectors are not standard and must be ordered as an option. They are shipped in a separate carton and must be installed in field.

- 2. Determine collector arrangement on trolley before starting assembly (i.e., whether all on one side or on two sides.)
- 3. Assemble collector bracket with hardware provided. Secure lightly for later adjustment.
- 4. Arrange collectors on pole in approximate locations and finger tighten to pole.
- 5. Open cover on trolley electrical panel. Feed wire leads from collector shoe terminals into trolley electrical panel through box type connector in enclosure. Connect collector wire leads to terminal strip in accordance with appropriate wiring diagrams furnished with trolley. Close panel cover.
- 6. If trolley is equipped with a mainline disconnect panel and/ or fuse panel, connect the collector wire leads per "Fuse and Mainline Disconnect Panels" section.

#### **INSTALLING TROLLEY AND HOIST**

1. Hoist and trolley combination may be installed on runway beam by either of two methods.

#### **AWARNING**

Be certain that electrical power supply to runway current conductors (if used) is "off" and locked in the open position.

- a. If one end of beam is open or exposed, trolley may be installed by sliding it onto beam.
- b. If trolley cannot be slid over end of beam, remove hex nuts (1, Figure 1), lockwashers and outer spacer washers from pins on one side of trolley. Spread or remove one side plate to facilitate positioning trolley over bottom flange of beam. Reinstall, side plate, outer spacer washers, lockwashers and hex nuts on suspension pins.

#### **▲**WARNING

After trolley has been Installed on beam, make sure suitable stop(s) is secured on open ended beams to prevent trolley from rolling off the beam. (Stops should contact trolley side plates, not wheels.) Make certain that all spacer washers and lockwashers are in place on suspension pins and that hex nuts are tight. Recheck clearance dimension between wheel flanges and beam flanges (Figure 1).

2. Engage slide collector shoes with runway conductor bars and make final adjustment to pole bracket and collector spacing. Tighten securely.

#### **ACAUTION**

Power supply must be same voltage, phase and frequency as specified on hoist and trolley motor nameplates.

3. Follow National, State and Local electrical codes when providing electrical service to hoist and trolley. Make electrical

connections using the wiring diagrams furnished with the trolley and the wiring diagram furnished with the hoist. Do not attempt to operate trolley or hoist before completing "Pre-Operation Checks and Adjustments."

#### **AWARNING**

This equipment must be effectively grounded according to the National Electrical Code, or other applicable codes. If the grounding method used is through the trolley wheels, then each section of track must be grounded by metal-to-metal connection to the building ground. Certain environments may prevent proper grounding by this means and in this case a separate grounding conductor should be provided.

#### ATTACH PUSH BUTTON STATION STRAIN CABLE

Trolleys ordered for use with hoists are shipped from the factory with the upper end of the push button station strain cable unconnected. If this is the case, it will be necessary to remove rope thimble from loose end of strain cable and attach strain cable as shown in Figure 2.

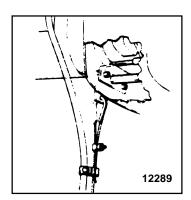

Figure 2. Push Button Strain Cable Attachment to Series Y80 YALE Hoist.

#### CONNECTING TROLLEY TO ELECTRICAL SERVICE

- 1. Follow Local, State and National Electric Codes when providing electrical service to hoist. Connect wires in accordance with appropriate trolley wiring diagram. Be certain that the electrical power supply is the same as specified on trolley and hoist motor data plates.
- 2. Common methods of connecting trolley to power supply are current collectors, previously described and flexible cable (tag line, festooned or cable reel).

**Note:** A grounding type male plug or permanent connection in an outlet box may be used for wiring tag line or festooned cable to power supply.

#### **ACAUTION**

Power supply must be same voltage, frequency and phase as specified on hoist and trolley nameplates.

#### **AWARNING**

All equipment must be effectively grounded electrically.

#### PRE-OPERATION CHECKS AND ADJUSTMENTS

1. Check Push Button Operation and Phasing.

#### **AWARNING**

On three phase hoists it is possible to have "Reverse Phasing" causing the lower block to lower when the "Up" button is depressed. When this condition exists the automatic limit stop switch is inoperative and hoist operation will be dangerous.

- a. To properly check the phase of the hoist, follow steps below:
  - (1) With "POWER OFF" operate the "START", "STOP" and "UP" push buttons and determine that they do not bind or stick in any position. DO NOT REMOVE WARNING TAG or test "DOWN" push button at this time.

#### **AWARNING**

If any push button binds or sticks in any position - DO NOT TURN POWER ON - determine the cause and correct the malfunction before operating.

- (2) Temporarily connect hoist to power source.
- (3) Operate "UP" button briefly to determine direction of hook travel.
- (4) If hook raises, phase is correct. Turn power off and make temporary connections permanent.
- (5) If hook lowers, hoist is "Reverse Phased." TURN POWER OFF and correct by interchanging any two leads at power source connection. Do not change internal wiring of hoist.
- b. The red WARNING TAG should be removed from push button cable only after it has been determined that the hoist is correctly phased. With "POWER OFF" the "DOWN" button should now be checked for freedom of operation. If malfunction exists, correct before operating with power.
- 2. Observe and perform all pre-operation checks required for the hoist, as outlined in the "Hoist Operation, Service and Parts Manual" furnished with the hoist.
- 3. Check Trolley Travel Directions. With trolley-hoist unit positioned on I-beam so that there is clear track to allow travel in each direction, check both "RIGHT" and "LEFT" traverse operation.

**Note:** When it is desired to change direction of **trolley travel** in relation to push button markings, turn POWER OFF and interchange connections of motor leads "CT-1" and "CT-2" at trolley contactor "L" on single speed trolleys. Be certain to interchange connections on both

motors on 2-motor trolleys. For two speed trolleys, interchange wires "A" and "C" at trolley contactor "L".

- 4. Adjust Ballast Resistors (if furnished).
- a. Ballast resistors installed on 3 phase motor driven trolleys provide a "cushion-start" effect which is helpful in reducing load swing during acceleration. It will be necessary to adjust resistor slide bands under load as directed below to obtain the desired rate of acceleration.

#### **AWARNING**

Ballast resistors are neither suitable nor intended for use in reducing maximum trolley running speed.

- b. Resistor slide bands (taps) are approximately set when shipped from factory. Field adjustments for desired acceleration should be made by user with maximum load to be moved suspended from hoist as follows:
  - (1) Turn power "OFF" at power source.
  - (2) Remove resistor cover. Discard any paper covering resistors.
  - (3) Loosen the three slide bands and move them to the extreme end to which jumpers are attached. This provides maximum resistance resulting in reduced motor voltage and motor torque.

#### **▲**CAUTION

To prevent damage to trolley motor, be certain the three slide bands are IN-LINE HORIZONTALLY on their respective resistors after any adjustment. DO NOT ROTATE slide bands on their resistors. This may cause electrical shorting.

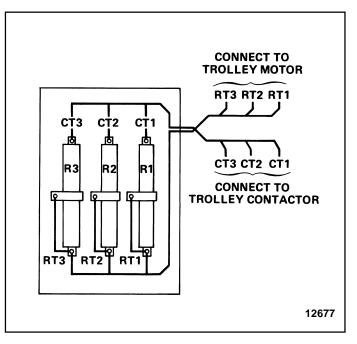

Figure 5. Resistor Wiring Diagram

- (4) Turn Power "ON" and with maximum load to be traversed suspended from hoist, press "RIGHT" or "LEFT" trolley button and note speed of trolley acceleration. If trolley does not move or accelerates too slowly, turn power "OFF" and move all three slide bands approximately 1" away from jumper end. Turn power on and repeat above test. Continue above procedure until desired acceleration is obtained.
- (5) Replace resistor cover.

#### **FUSE AND MAINLINE DISCONNECT PANELS**

Mainline disconnect panels and/or hoist-trolley fuse panels are provided as options on motor driven trolleys to assist users in complying with OSHA codes. When ordered with trolley, they will be completely installed on trolley and wired into trolley electrical system.

Electrical service is to be connected to trolleys equipped with fuse panels and/or mainline disconnect panels as follows:

- 1. Fuse Panels Only. Connect leads from power supply to hoist fuse terminals "L-1", "L-2" and "L-3" (3-phase) under hoist fuses. See trolley wiring diagram.
- 2. Mainline Disconnect (furnished with fuse panels only). Connect power supply leads "ML-1", "ML-2" and "ML-3" (3-phase) to the upper power terminals of mainline contactor. Refer to trolley wiring diagram.

#### **ACAUTION**

Power supply must be same voltage, frequency and phase as specified on hoist and trolley nameplates.

#### MAINTENANCE AND LUBRICATION

- YALE Motor Driven Trolleys are built to give long service, but should be inspected periodically for evidence of damage or wear, particularly when subjected to unusually severe operating conditions.
  - a. Wheel bearings have grease sealed in and require no additional lubricant.

- b. Drive wheel gears are to be lubricated with an open type gear grease which is heavy, plastic, extreme pressure and tacky; such as MOBILTAC 275 NC or equal.
- c. The right angle worm gear reducer oil is a synthetic lubricant with excellent wear protection capability and long life. This oil does not require changing. When replacing oil due to repairs, use MOBIL SHC 634 or equal.

#### REPLACEMENT PARTS

The following parts lists and illustrations cover standard model YALE motor driven trolleys. Typical units are used as the basis for the exploded parts illustrations; therefore, certain variations may occur from the parts information given. For this reason always give the catalog number, model number, motor horsepower, voltage, phase and frequency of trolley when ordering replacement parts. For motors, gearboxes and electrical components, give complete nameplate data. Pins referred to in some column headings are trolley suspension pins. The symbol  $\varnothing$  indicates diameter.

These YALE motor driven trolleys are built in three basic wheel sizes. They are 4" diameter wheels, 6-1/2" diameter wheels, and 8" diameter wheels. When selecting parts from the following parts list, be sure to use appropriate illustration and parts table for your particular trolley size, based on wheel size and whether it is a single or two motor trolley.

The factory recommends complete replacement of the motor or gearbox. Gearbox service is available, however, from your local authorized YALE repair station.

The numbers assigned to the parts of our various assemblies in our parts lists are not the part numbers used in manufacturing the part. They are identification numbers, that when given with the trolley serial number, permit us to identify, select or manufacture, and ship the correct part needed for any trolley.

Supply Complete numbers from the identification plate of the gearbox that match the numbers (including digits - where x's appear) In the lower right hand comer of the parts illustration for the motor and gearbox assemblies.

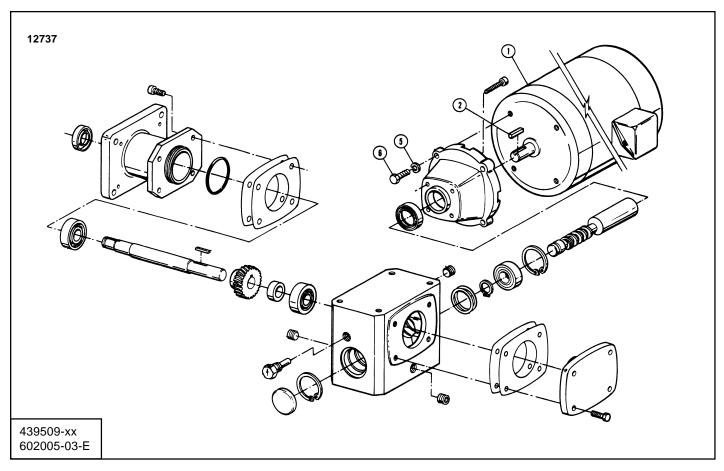

Figure 11. Motor and Gearbox Assembly (3-1/8" & 5" c/c Pins)

**Notice:** Five types of motor and gearbox assemblies have been used for trolleys with 3-1/8" & 5" c/c. When ordering replacement gearbox for 439076-xx gearbox, order new gearbox and motor.

**Ordering Instructions:** Furnish complete data from motor and gearbox nameplates with parts order. Replacement parts cannot be provided without this information.

# Recommended Spare Parts for Your Yale Motor Driven Trolley

Certain parts of your hoist will, in time, require replacement under normal wear conditions. It is suggested that the following parts be purchased for your hoist as spares for future use.

Motor Pinion
One Set of Wheel Bearings
One Set of Wheels
One Contactor
One Set of Fuses (If Required)

**Note:** When ordering parts always furnish Model and Catalog Number and Motor Nameplate Data of trolley on which the parts are to be used.

Parts for your trolley are available from your local authorized **Yale** repair station. For the location of your nearest repair station, write:

## WARRANTY

#### WARRANTY AND LIMITATION OF REMEDY AND LIABILITY

- A. Seller warrants that its products and parts, when shipped, and its work (including installation, construction and start-up), when performed, will meet applicable specifications, will be of good quality and will be free from defects in material and workmanship. All claims for defective products or parts under this warranty must be made in writing immediately upon discovery and in any event, within one (1) year from shipment of the applicable item unless Seller specifically assumes installation, construction or start-up responsibility. All claims for defective products or parts when Seller specifically assumes installation, construction or start-up responsibility and all claims for defective work must be made in writing immediately upon discovery and in any event, within one (1) year from completion of the applicable work by Seller, provided; however, all claims for defective products and parts made in writing no later than eighteen (18) months after shipment. Defective items must be held for Seller's inspection and returned to the original f.o.b. point upon request. THE FOREGOING IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES WHATSOEVER, EXPRESS, IMPLIED AND STATUTORY, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS.
- B. Upon Buyer's submission of a claim as provided above and its substantiation, Seller shall at its option either (i) repair or replace its product, part or work at either the original f.o.b. point of delivery or at Seller's authorized service station nearest Buyer or (ii) refund an equitable portion of the purchase price.
- C. This warranty is contingent upon Buyer's proper maintenance and care of Seller's products, and does not extend to normal wear and tear. Seller reserves the right to void warranty in event of Buyer's use of inappropriate materials in the course of repair or maintenance, or if Seller's products have been dismantled prior to submission to Seller for warranty inspection.
- D. The foregoing is Seller's only obligation and Buyer's exclusive remedy for breach of warranty and is Buyer's exclusive remedy hereunder by way of breach of contract, tort, strict liability or otherwise. In no event shall Buyer be entitled to or Seller liable for incidental or consequential damages. Any action for breach of this agreement must be commenced within one (1) year after the cause of action has accrued.
