# How To Determine Your Air Hoist Requirements

## Hoist Capacity

Determine the maximum load to be lifted. If the load falls between standard rated capacities, always select the higher capacity (i.e., for 4,300 lb. maximum load, use 6,000 lb., or 3-ton capacity hoist).

## Hoist Lift

To determine the total lift required, measure the distance from the bottom of the beam to the lowest point on the floor to be reached and subtract the hoist headroom dimension shown in the specifications. The remaining distance is the lift required on the hoist. Always select a standard lift equal to or greater than the distance.

## Duty Cycle

Air motors inherently are self-cooling during operations. Unlike an electric motor which heats during operation, air motors are suitable for unlimited “on-time” and unlimited “number of starts”. Coffing® CAH model air hoists are desirable for duty cycles demanding 100% “on-time”.

## Explosive Atmosphere

Since air hoists operate on compressed air, there is no electrical arcing hazard to cause explosions in such areas as paint spraying and petrochemical facilities. For those hazardous atmosphere applications where resistance to friction sparks is vitally important, spark resistant models are available. Spark resistant features include: bronze alloy hooks, stainless steel hook latches, non-magnetic, stainless steel load chain; modified load sprocket, guide and stripper arrangement; and stainless steel or anodized aluminum lower blocks. Since stainless steel load chain is of lower strength than standard, CAH spark resistant models are de-rated in capacity.

## Control

Normally, air hoists lift loads at a faster rate of speed than electric hoists. Additionally, air hoists have variable speed control to lift loads from creep speed to full speed. Applications requiring variable speed lifting for precise load spotting and smooth starting action should employ an air hoist. Also to be considered are pull cord or pendant throttle as the means for operator control of the hoist and load.

## Hoist Suspension

Coffing® CAH model air hoists can be offered in a wide variety of suspension options. Hook type suspension offer maximum versatility and portability in most environments. Lug suspensions save headroom and can be used with rigid mount trolleys or in permanently mounted locations.

## Trolley Type

There are three standard trolley types that can be used to suspend Coffing® CAH model air hoists.

**Push Trolley** — Recommended for light capacities up to 2-tons and lifts below 20 feet. Most economical.

**Hand Geared Trolley** — Offers precise control for load spotting. Most favorable for higher capacities, short monorails, and where lifts exceed 20 feet.

**Air Motor Driven Trolley** — Most widely used method of suspension, particularly 2-ton capacity and above. Often a necessity where long monorails are used.

## Special Note

The installation of every air hoist must include a filter and lubricator in the air line. An air regulator is also recommended.

## More Coffing Air Power...

### The TMM-140 Air Manipulator and Air Balancer

In addition to the CAH line of air hoists, the Coffing TMM-140 Air Manipulator and the Air Balancer offer great versatility in specialized material lifting and positioning applications.

**TMM-140 Air Manipulator** is ideal for workstation applications. Lightweight and portable, the unit weighs less than 20 lbs. and operates at 100% duty cycle. Capacity: 300 lb. / 140 Kg.

**The Coffing Air Balancer** offers versatile float capability — quick, effortless, precise positioning of materials is easily accomplished. Capacity: Up to 500 lbs. (600 lbs. for double-reeved models).

*For more information, please request Coffing publications:*

**CB-9** TMM-140 Air Manipulator; **CAB-1** Air Balancer

**FILTER-LUBRICATOR UNITS**

Air hoists must have a supply of clean, lubricated air for their operation. A filter and lubricator must be installed in the air supply line, as close as practical to the hoist. The recommended operating air pressure for all capacities of COFFING® air hoists is 90 PSI. When air line pressure exceeds 115 PSI, it is required that a pressure regulator be provided in the supply line to maintain proper pressure.

**BULLARD HOOKS**

All hoists are furnished as standard with hooks equipped with hook latches. Bullard Hooks with a rugged cast swing gate locking member that provides greater assurance of load containment are available at additional cost.

**REDUNDANT SUPPORT**

Hoist suspension redundant support for the CAH-Small Frame hoist is available for additional cost. This redundant support features a cable that inserts through the hoist frame and around initial support.

**PENDANT THROTTLE CONVERSION KIT**

Kit for converting the pull cord CAH-Small Frame COFFING® Air Hoist to pendant throttle operation has a standard 6-foot pendant hose assembly. Longer hose assemblies available. Order Model No. C2269. Shipping weight is 8 pounds.

**CHAIN CONTAINERS**

Chain containers provide an ideal means for eliminating hanging tail chains. They are easily installed and accept the chain in such a way that chains tend not to kink or twist. State codes often specify the use of a chain container with each hoist.

Whichever hose-use problem you may have – on the production line, in the shipping area or in maintenance – these automatic retracting reels can provide the solution. Easy-set mounting lugs and adjustable 4-roller guides allow variable mounting for ceiling, wall, bench or trucks. An instant-action ratchet lock engages when hose travel stops, disengages with a slight pull. Other features include the "Safe-to-Change" spring motor which is self-contained for safe handling and all-steel construction for maximum reliability. Hose and ball stop are included. Pivot Base is optional.
