

NEW and Improved Version of the **ERGRIP™ HANDLE**

Since 1987 the HONSA **ERGRIP™ HANDLE** has been protecting operators of rotary slicing knives from Carpal Tunnel Syndrome and vibration related injuries. The ergonomically designed HONSA **ERGRIP™ HANDLE** easily attaches to rotary slicing knives, helping to increase productivity and safety.

The upright handle places your workers wrist in a more comfortable, safer position, thus increasing arm power by at least 30%. Access to more power establishes less fatigue, making your workers more efficient and protected.

The HONSA **ERGRIP™ HANDLE** *ELIMINATES* ulnar deviation, and carpal tunnel syndrome, a primary contributor to cumulative trauma disorders. The upright angled wrist-to work handle reduces pressure on the median nerve, which is a major cause of the disorder. Ulnar deviation is further lessened with the aid of the torque-reducing stabilizer cuff, vibration damping isolator grommets, and drive unit sleeve.

Other safety features include a protective hand guard and a firm but extremely comfortable handle grip for better control.

The HONSA **ERGRIP™ HANDLE** utilizes the softest USDA approved grip material invented and formulated by HONSA Ergonomic Technologies, Inc.

These features of the HONSA **ERGRIP™ HANDLE** add power, control, and comfort to promote safety and productivity in the meat and poultry industries.

**USDA
APPROVED**

FEATURES:

- ★ Upright Handle
- ★ Comfortable Grip
- ★ Reduces Vibration
- ★ Reduces Torque
- ★ Increases Hand & Arm power
- ★ Protective Hand Guard
- ★ Softest and most durable handles approved by the USDA
